DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-16, drawn to a first method, comprising regulating aneurysm formation, growth and/or stability, by administering a composition comprising a matrix material and cells in two components that yield a polymer scaffold.

Group II, claim(s) 17-33, drawn to a second method, comprising increasing endothelialization or development of a neoendothelium across an aneurysm ostium, by administering a composition comprising a matrix material and cells in two components that yield a polymer scaffold.

Group III, claim(s) 49-50, drawn to a second product, which comprises two cannulae, one of which comprises a matrix material.

Group IV, claim(s) 51-61, drawn to a method of increasing endothelialization, by administering a third product comprising a biocompatible material comprising cells.

Group V, claim(s) 62, drawn to a third method, comprising reducing or eliminating coil compaction, by administering a composition comprising a matrix material and cells in two components that yield a polymer scaffold.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the inventions, as claimed, lacks unity *a priori*.

An international or a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories: (1) a product and a process specially adapted for the manufacture of said product; (2) a product and a process of use of said product; (3) a product, a process specially

Application/Control Number:

10/531,544 Art Unit: 1651

adapted for the manufacture of the said product, and a use of the said product; (4) a process and an apparatus or means specifically designed for carrying out the said process; or (5) a product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process. If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the main invention in the claims. See 37 C.F.R. 1.475.

In the instant case, the first category mentioned in the claims is the method of claim 1: regulating aneurysm formation, growth and/or stability by administering a composition comprising a matrix material and cells in two components, that, when combined, yield a polymer scaffold comprising the cells. Claim 1, and the claims depending therefrom, recite a process of using a product, the product being the composition. Therefore, Inventive Group I is considered to be the main invention, and unity of invention exists between the product (the composition administered in claim 1), a process specially adapted for the manufacture of the said product, and the use of the said product (the method of claim 1).

The claims of Inventive Group II are directed to a *second* method of using the composition of the main invention, thus these claims are not considered to share unity of invention.

The claims of Inventive Group III are directed to a *second* product, distinct from the product of the main invention, thus these claims are not considered to share unity of invention.

The claims of Inventive Group IV are directed to a *third* product, distinct from the product of the main invention, thus these claims are not considered to share unity of invention.

Finally, the claims of Inventive Group V are directed to a *third* method of using the composition of the main invention, thus these claims are not considered to share unity of invention.

Furthermore, it is noted this application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

1. Species of Cells: a) vascular cells, b) endothelial cells, c) stem cells

2. Species of matrix materials: d) fibrin, e) fibrinogen, f) collagen, g) polyorthoesters, h) polyvinyl alcohols, i) polyamides, j) polycarbonates, k) polyvinyl pyrrolidone, l) marine adhesive proteins, m) cyanoacrylates, n) mixtures of any of d)-m) (specific combination must be set forth)

3. Additional component to be included in the 'second component': o) enzymes, p) ions, including calcium q) growth factors, r) biologic agents, including thrombin

Applicant is required, in reply to this action, to elect a single species from each of the THREE (3) groups above, to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the

Application/Control Number:

10/531,544

Art Unit: 1651

following reasons: Pursuant to PCT Rule 13.2 and PCT Administrative Instructions, Annex B, Part 1(f)(I)(B)(2), the species are not art recognized equivalents.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allison M. Ford whose telephone number is 571-272-2936. The examiner can normally be reached on 7:30-5 M-Th, alternate Fridays.

10/531,544

Art Unit: 1651

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
